1. Computer–Hardware Components

- A.** 1. b. 2. a. 3. c. 4. b. 5. a.
6. a. 7. a.
- B.** 1. F 2. F 3. F 4. F 5. T
- C.** 1. output device 2. Storage devices 3. 3D camera
4. input devices 5. radio frequency

- A.** 1. Motherboard & Disk drive are the hardware attached inside the CPU box.
2. Printer and Monitor are the examples of output devices.
3. Yes, mouse and keyboard can be wireless.
4. A disk drive is an internal hardware component of the computer system that is used to read and write on storage disks.
5. CD- RW stands for Compact Disk Rewritable.
6. Skylake is Intel's multi-core chips code which boots graphics and applications while improving battery and life in laptops.

- B.** 1. The differences between Input and Output Devices are as follows:

Input Devices

- a. Input devices are devices through which a computer accepts data and instructions
- b. Example of the input devices are:
Mouse, Keyboard

Output Devices

- a. Output devices are devices through which a computer displays the information and result of computation to the user.
- b. Example of the output devices are:
Monitor, Printer

2. CPU (Central Processing Unit) is a processor, sometimes called a microprocessor. It is the brain of the computer that does all the calculations and runs all the programs. It manages all the operations and carries out the basic instructions which operate a computer.

3. Virtual keyboard is picture of a keyboard which is displayed on a computer screen and the user points and clicks on the pictures of keys to enter text.
4. A port is a slot on the motherboard that is used to connect other components of the computer such as keyboard, mouse, monitor, etc. to the motherboard. Three types of ports are:
 1. Serial Port
 2. Universal Serial Bus (USB) Port
 3. Parallel Port
5. Switched Mode Power Supply (SMPS) is a hardware component of the computer used to control the power supply. It is also known as the power supply unit of the computer. It takes the Alternating Current (AC) from a source and converts it into low voltage Direct Current (DC) and then supply to other parts of the computer system.

5. 8 6. Binary

- A.** 1. Octal number system consists of eight digits from 0 to 7.
2. In 1 nibble there are 4 bits.
3. The total number of digits used in a number system is called its base or radix.
- B.** 1. A number system is simply a method of counting. There are four types of number systems:
(i) Decimal number system
(ii) Binary number system
(iii) Octal number system
(iv) Hexadecimal number system
2. To convert a decimal number into a binary number:
- Step 1** Divide the decimal number by 2 (the base of the binary number system).
Step 2 Note down the quotient and the remainder.
Step 3 Divide the quotient obtained again by 2 and note down the resulting quotient and remainder.
Step 4 Repeat the procedure till you reach a quotient less than 2.
Step 5 List the last quotient and all the remainders (moving from bottom to top).
3. The rules to subtract two binary numbers are:

X	Y	X - Y
0	0	$0 - 0 = 0$
0	1	$0 - 1 = 1$ (borrow 1, so that $10 - 1 = 1$)
1	0	$1 - 0 = 1$
1	1	$1 - 1 = 0$

- C.** 1. $(10111.011)_2 = 1 \times 2^4 + 0 \times 2^3 + 1 \times 2^2 + 1 \times 2^1 + 1 \times 2^0 + 0 \times 2^{-1} + 1 \times 2^{-2} + 1 \times 2^{-3}$

1. Primary Key is a unique field by which the records are uniquely identified in a table.
 2. The final result of the manipulated data that comes from tables or queries in DBMS is known as a report.
 3. A query is the most powerful object of database. It helps us to retrieve information from a table based on some criteria or condition.
 4. A form is a database object used to create a user interface to enter or update a record in a table that is connected to it.
- B.**
1. Steps to add record in Database are:

Step 1 Open the required table in Datasheet view.

Step 2 Place the pointer where you want to add the new record.

Steps to delete a record are:

Step 1 Open the required table in Datasheet view.

Step 2 Select the record which you want to delete.

Step 3 Right-click and select the Delete Record option.

2. Four data types of MS Access are:

1. Text 2. Memo 3. Number 4. AutoNumber

C. 1. Advantages of a Database system are:

- (i) It minimizes the duplication of data by integrating and sharing the data files.
- (ii) It saves the storage space.
- (iii) All the users are provided with some access rights or privileges and permissions.
- (iv) The files can be easily updated whenever any changes are being made.

2. There are two types of views in MS Access: Datasheet view and Design view. We can switch between these two views by clicking on the View command under the Views group on the Home tab. We can also use the Design View and Datasheet View buttons located on the right-hand side of the Status bar to switch between two views.

3. Following are the rules we should remember while writing field names:

- (i) Field name can be up to 64 characters long.
- (ii) Field name can include any combination of letters, numbers, spaces, and special characters except a period (.), an exclamation mark (!), an accent grave (') and brackets ([]).
