Periods Days	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday

DEVELOPMENT MILESTONES IN A CHILD

Development milestones are a set of functional skills or age-specific tasks that most children can do at a certain age. These milestones help the teacher to identify and understand how children differ in different age groups.

	Age 5 - 8 Years
Physical	 First permanent tooth erupts Shows mature throwing and catching patterns Writing is now smaller and more readable Drawings are now more detailed, organised and have a sense of depth
Cognitive	 Attention continues to improve, becomes more selective and adaptable Recall, scripted memory, and auto-biographical memory improves Counts on and counts down, engaging in simple addition and subtraction Thoughts are now more logical
Language	 Vocabulary reaches about 10,000 words Vocabulary increases rapidly throughout middle childhood
Emotional/Social	 Ability to predict and interpret emotional reactions of others enhances Relies more on language to express empathy Self-conscious emotions of pride and guilt are governed by personal responsibility Attends to facial and situational cues in interpreting another's feelings Peer interaction is now more prosocial, and physical aggression declines

Age 9 - 11 Years				
Physical	Motor skills develop resulting enhanced reflexes			
Cognitive	Applies several memory strategies at onceCognitive self-regulation is now improved			
Language	Ability to use complex grammatical constructions enhancesConversational strategies are now more refined			
Emotional/Social	Self-esteem tends to risePeer groups emerge			

Age 11 - 20 Years				
Physical	 If a girl, reaches peak of growth spurt If a girl, motor performance gradually increases and then levels off If a boy, reaches peak and then completes growth spurt If a boy, motor performance increases dramatically 			
Cognitive	 Is now more self-conscious and self-focused Becomes a better everyday planner and decision maker			
Emotional/Social	May show increased gender stereotyping of attitudes and behaviourMay have a conventional moral orientation			

Managing the children's learning needs according to their developmental milestones is the key to a successful teaching-learning transaction in the classroom.

TEACHING PEDAGOGIES

Pedagogy is often described as the approach to teaching. It is the study of teaching methods including the aims of education and the ways in which such goals can be achieved.

Lesson Plans

A lesson plan is the instructor's road map which specifies what students needs to learn and how it can be done effectively during the class time. A lesson plan helps teachers in the classroom by providing a detailed outline to follow in each class.

A lesson plan addresses and integrates three key components:

- Learning objectives
- Learning activities
- Assessment to check the student's understanding

A lesson plan provides an outline of the teaching goals:

Before the class:

- 1. Identify the learning objectives.
- 2. Plan the lesson in an engaging and meaningful manner.
- 3. Plan to assess student's understanding.
- 4. Plan for a lesson closure.

During the class:

Present the lesson plan.

After the class:

Reflect on what worked well and why. If needed, revise the lesson plan.

"Knowing yourself is the beginning of all wisdom."

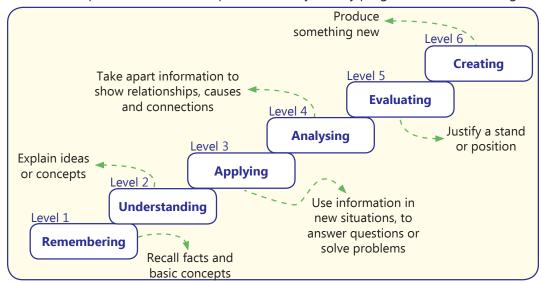

Teaching Strategies

Numerous strategies have evolved over the years to facilitate the teaching-learning process in the classrooms.

Bloom's Taxonomy

Bloom's Taxonomy was created by **Dr Benjamin Bloom** and several of his colleagues, to promote higher forms of thinking in education instead of rote learning. There are three domains of learning: cognitive (mental), affective (emotional), and psychomotor (physical). However, when we refer to Bloom's Taxonomy we speak of the cognitive domain. Bloom's Taxonomy is a list of cognitive skills that is used by teachers to determine the level of thinking their students have achieved. As a teacher, one should attempt to move students up the taxonomy as they progress in their knowledge.

Teachers should focus on helping students to remember information before expecting them to understand it, helping them understand it before expecting them to apply it to a new situation, and so on.

"If you have no confidence in self, you are twice defeated in the race of life."

LESSON PLAN

Touchpad ModuLAR Ver 1.0 Class-8

1. Computer Networking

Teaching Objectives

Students will learn about

Computer Network

Advantages of Computer Network

Components Required for a Network

Topology

■ Wireless Networking Technology

Need for Computer Network

Network Terminology

Types of Network

Network Architecture

Teaching Plan Number of periods: 4

While teaching this chapter, tell the students that the process of connecting computers and peripheral devices with each other to exchange data is called computer networking.

Tell the students about the meaning and basics of computer network.

Share with the students the need for computer network – for resource sharing and for communication.

Discuss with the students the advantages of a computer network.

Introduce network terms like Server (host computer) and Client (dependent on server).

Explain the different types of servers to the students covering dedicated server, print server, database server, network server and web server.

Tell the students about the components required for a network covering NIC, hub/switch, router, modem and networking cable.

Share with the students that on the basis of geographical area covered, the networks can be classified into LAN (Local Area Network), MAN (Metropolitan Area Network), WAN (Wide Area Network), PAN (Personal Area Network) and CAN (Campus Area Network).

Introduce Topology as geometric arrangement of computers or nodes in a network.

Explain the difference between different types of topologies covering bus topology, ring topology, star topology, tree topology and mesh topology (Refer Suggested Activity also).

Tell the students that the network architecture defines the overall design of the computer network.

Share with the students the two types of network architectures as Peer-to-Peer network and Client-Server network.

Share with the students about the wireless networking technologies detailing about Wi-Fi and Bluetooth.

Introduce Protocol as a set of rules that govern the communication between the computers on a network.

Discuss briefly about the different types of protocols explaining about HTTP, HTTPS, FTP, TC/IP, POP3, IMAP and SMTP.

Ensure that the scope of Teacher's Corner given at the end of the chapter has been covered.

Extension

Ask the students some oral questions based on this chapter.

- Q. Define computer network.
- Q. What is the need for a computer network?
- Q. What are the advantages of a computer network?
- O. Define server / client.
- Q. What are the different types of computer servers?
- Q. What are the components required for a network?
- Q. Define LAN / MAN / WAN / PAN / CAN.
- Q. Define Topology.
- Q. Name different types of topologies.
- Q. What is meant by protocol?

Evaluation

After explaining the chapter, let the students do the course book exercises given on Pages 13 and 14 of the main course book as Exercise.

In Creative Assignment, activity like In The Lab given on Page 14 of the main course book will enhance the ability of the students and serve as a Subject Enrichment activity.

Suggested Activity

Ask the students to make models of different types of topologies using marbles and used wire pieces / straws.

2. Database Management System

Teaching Objectives

Students will learn about

- Concept of a Database
- Types of Databases

- Advantages of a Database System
- Structure of a Database

Teaching Plan

Number of periods: 5

While teaching this chapter, tell the students that data is a collection of characters and symbols which has no meaning. It is also called raw data. This data can be converted into meaningful information after analyzing and processing.

Tell the students about the concepts of a Database in detail.

Share with the students the advantages of a database system.

Explain the different types of database:

Flat File Database

Relational Database

Tell the students about the structure of a database and also explain the use of following terms:

Table

Primary key

Query

Report

Form

Ensure that the scope of Teacher's Corner given at the end of the chapter has been covered.

Extension

Ask the students some oral questions based on this chapter.

- Q. Define database.
- Q. Name the different types of databases.
- O. What is the structure of database?

Evaluation

After explaining the chapter, let the students do the course book exercises given on Pages 17 and 18 of the main course book as Exercise.

In Creative Assignment, activity like In The Lab given on Page 18 of the main course book will enhance the ability of the students and serve as a Subject Enrichment activity.

3. Introduction to MS Access 2010

Teaching Objectives

Students will learn about

MS Access 2010

Components of MS Access 2010

Types of Views in MS Access

Data Types in MS Access 2010

Setting a Primary Key

- Features of MS Access 2010
- Creating a Database
- Adding Fields to a Table
- Rules for Writing a Field Name in MS Access

Teaching Plan

Number of periods: 5

While teaching this chapter, tell the students that the computerized database system was introduced in 1960s.

Introduce:

- Database as organizing data in a manner which helps to store and retrieve a large amount of data efficiently.
- Database Management System as a collection of programs required to store and retrieve data from a database.

Explain to the students the meaning of the two types of databases – Flat File Database and Relational Database.

Share with the students the advantages of a database system.

Draw on board and explain the structure of a database to the students explaining about table, fields, records, primary key, query, report and form.

Introduce MS Access 2010 as a powerful and easy to use Relational Database Management System and is a part of MS Office Suite.

Demonstrate the steps to start MS Access 2010.

Familiarize the students with the various components of MS Access 2010 window covering Quick Access Toolbar, Title Bar, Ribbon, Navigation Pane, Navigation Buttons, Work Area and Objects Tabs.

Demonstrate to the students the two ways of creating a database as:

Creating a blank database

Creating a database using Templates

Show the students the method to open an existing database and close a database.

Explain different data types used in MS Access 2010 covering Text, Memo, Number, Auto Number, Date/Time, Yes/No, OLE, Hyperlink and Lookup Wizard.

Discuss with the students the use of the different types of views in MS Access 2010 as Datasheet view and Design view.

Share with the students the rules for defining field names in MS Access 2010.

Show to the students the method to exit MS Access 2010.

Ensure that the scope of Teacher's Corner given at the end of the chapter has been covered.

Extension

- O. Define database.
- Q. What is Database Management System?
- Q. Expand DBMS.
- Q. Name the different types of databases.
- Q. What type of database is MS Access 2010?
- Q. Give any two advantages of Database System.
- Q. Define Table / Query / Report / Form.
- Q. Name any three data types used in MS Access 2010.
- O. What does OLE stands for?
- Q. What are the rules for writing field names?
- Q. What is the use of Field Name / Description in the Table design window?

After explaining the chapter, let the students do the course book exercises given on Pages 26 and 27 of the main course book as Exercise.

In Creative Assignment, activity like In The Lab given on Page 27 of the main course book will enhance the ability of the students and serve as a Subject Enrichment activity.

Suggested Activity

Ask the students to create a table storing information about details of their ten friends and sort the records in the table in alphabetical order.

4. Working with Tables in MS Access

Teaching Objectives

Students will learn about

Creating a New Table

Handling Columns in a Table

Handling Records in a Table

Teaching Plan Number of periods: 3

While teaching this chapter, tell the students that MS Access 2010 allows us to add maximum of 256 columns and unlimited rows in a table.

Tell the students that Tables can be created in three ways.

Demonstrate to the students the steps to create a Table:

In Design view

- In Datasheet view
- By using Templates

Show all the steps involved in creating the table in Access to the students.

Explain how to handle columns in a table by sharing the steps involved in:

- Adding a new column
- Deleting a column
- Hiding/Unhiding a column

- Moving a column
- Freezing/Unfreezing a column
- Renaming a column
- Setting column properties

Tell the students how to handle records in a table by sharing the steps involved in:

- Adding a record
- Editing a record
- Deleting a record

Ensure that the scope of Teacher's Corner given at the end of the chapter has been covered.

Extension

- Q. Define a table.
- Q. Write the different types of ways for creating a table.
- Q. What is a column?
- O. What is a record?

- Q. what actions can be performed on a column?
- Q. What functions can be performed on a record?

After explaining the chapter, let the students do the course book exercises given on Pages 34 and 35 of the main course book as Exercise.

In Creative Assignment, activity like In The Lab given on Page 35 of the main course book will enhance the ability of the students and serve as a Subject Enrichment activity.

Suggested Activity

Ask the students to create a table for the data regarding all the classmates. Add height, weight and age of every student.

5. Advanced Features of MS Access

Teaching Objectives

Students will learn about

Performing Calculation

Sorting Records

Importing Data from Other Applications

Searching Records

Applying Filters in a Table

Exporting Data from MS Access

Teaching Plan Number of periods: 3

While teaching this chapter, tell the students that you can perform calculation in MS Access by using the Totals command.

Tell the students about performing calculations and the steps involved in doing so.

Show the students how to search records with the steps involved in doing so.

Explain the process of sorting of records and steps involved to students.

Tell the students how to apply filters in a table with complete steps in the following:

Removing filter

Using custom filter

Demonstrate to the students the steps to import data from other applications.

Show all the steps involved in exporting data from MS Access.

Ensure that the scope of Teacher's Corner given at the end of the chapter has been covered.

Extension

- Q. What is the purpose of performing calculations?
- Q. How to search records in Access?
- O. How to sort records in MS Access?

- Q. How to apply filters in a table?
- Q. Explain how to import data from other applications.
- Q. Demonstrate how to export data from MS Access.

After explaining the chapter, let the students do the course book exercises given on Pages 42 and 43 of the main course book as Exercise.

In Creative Assignment, activity like In The Lab given on Page 43 of the main course book will enhance the ability of the students and serve as a Subject Enrichment activity.

Suggested Activity

Ask the students to import data from word document to MS Access.

6. Queries in MS Access

Teaching Objectives

Students will learn about

What is a Query?

Types of Queries

Setting up Relationship

Creating a Query

Teaching Plan

Number of periods: 3

While teaching this chapter, tell the students that MS Access is used to create tables and maintain records in a database along with preparing Forms, Queries and Reports.

Introduce Query as the object that can give information which the user might not be able to find by looking at the Table directly.

Explain the different types of Queries as: Select Query, Parameter Query, Action Query, Crosstab Query and SQL.

Tell the students about the relationship between the Primary Key and the Foreign Key.

Show to the students the steps to define relationships between tables.

Demonstrate the steps to create a query.

Ensure that the scope of Teacher's Corner given at the end of the chapter has been covered.

Extension

- Q. Define Query.
- Q. Name the different views in which a Form can be displayed.
- Q. Name the different types of Forms in MS Access.
- Q. Where is Navigation Bar located?

- Q. Name the different types of Queries.
- Q. Define Primary Key / Foreign key.
- Q. Name any four parameters of Query window.

After explaining the chapter, let the students do the course book exercises given on Pages 50 and 51 of the main course book as Exercise.

In Creative Assignment, activity like In The Lab given on Page 51 of the main course book will enhance the ability of the students and serve as a Subject Enrichment activity.

Suggested Activity

Using the Table created in the previous chapter create a query to display names of friends whose name starts with A or D.

7. Forms in MS Access

Teaching Objectives

Students will learn about

Forms

Creating a Form Using Design

Viewing the Records

Creating a Form using Wizard

Types of Forms

Formatting a Form

Teaching Plan Number of periods: 2

While teaching this chapter, tell the students that MS Access is used to create tables and maintain records in a database along with preparing Forms, Queries and Reports.

Introduce Forms as objects used to add, edit and display data from tables in a user friendly manner.

Share with the students that a Form can be displayed in three views – Form View, Design View and Layout View.

Demonstrate to the students the steps to create a Form.

Explain different types of Forms covering Multiple Items, Datasheet, Split Form and Modal Dialog.

Familiarize the students with the Navigation Bar of the Form window to view and navigate between records in a Table.

Tell the students that the appearance of the Form can be formatted using Design and Format tabs.

Ensure that the scope of Teacher's Corner given at the end of the chapter has been covered.

Extension

Ask the students some oral questions based on this chapter.

- Q. What is a form in MS Access?Q. How to create a form using wizard?
- Q. How to create a form using design?

Touchpad MODULAR (Version 1.0)-VIII (Lesson Plan)

Q. Write the types of forms.

Evaluation

After explaining the chapter, let the students do the course book exercises given on Pages 57 and 58 of the main course book as Exercise.

In Creative Assignment, activity like In The Lab given on Page 58 of the main course book will enhance the ability of the students and serve as a Subject Enrichment activity.

Suggested Activity

Ask the students to create a form where the students can fill their basic details.

8. Reports in MS Access

Teaching Objectives

Students will learn about

- Understanding the Structure of the Report
 © Creating a Report
- Formatting a Report

Teaching Plan Number of periods: 3

While teaching this chapter, tell the students that MS Access is used to create tables and maintain records in a database along with preparing Forms, Queries and Reports.

Introduce Report as an object used to organize and present data in a user friendly format for printing purpose.

Demonstrate the steps to:

Create a Report

Formatting a Report

Ensure that the scope of Teacher's Corner given at the end of the chapter has been covered.

Extension

Ask the students some oral questions based on this chapter.

- Q. What is a report in MS Access?
- Q. How to create a report?
- Q. How to format a report?
- Q. Write the structure of a report.

Evaluation

After explaining the chapter, let the students do the course book exercises given on Pages 64 and 65 of the main course book as Exercise.

In Creative Assignment, activity like In The Lab given on Page 65 of the main course book will enhance the ability of the students and serve as a Subject Enrichment activity.

Suggested Activity

Ask the students to create a report of all the students performance in previous year.

9. Introduction to Python

Teaching Objectives

Students will learn about

Features of Python

Variables in Python

Keywords

Operators

The Input() Statement

Creating Simple Python Programs

How to use Python IDLE

Character Set

Data Types

Comments in Python

The Print() Statement

Teaching Plan Number of periods: 4

While teaching this chapter, tell the students about Python as a high level programming language and its uses.

Share with the students the important features of Python.

Demonstrate the steps to start Python IDLE.

Familiarize the students with the interface of Python IDLE.

Tell the students the basic commands of IDLE like creating a new file, saving a file, opening an existing file, executing a programming file, closing a file and exiting IDLE.

Introduce variables as memory location used to store data.

Share with the students the rules of naming variable in Python.

Tell the students about important terms like character set, keywords and data types (covering number, string, list, tuple, dictionary and none).

Explain the operators used in Python stating the common arithmetic operators (+, -, *, /, //, %, **), relational operators (=, !=, >, <, >=, <=) and logical operators (&, |).

Demonstrate to the students the use of these operators and commands in simple Python programs.

Explain the use and importance of comments in Python.

Tell the students the purpose and syntax of:

• The input() statement

• The print() statement

Encourage the students to write simple programs in Python.

Ensure that the scope of Teacher's Corner given at the end of the chapter has been covered.

- Q. What is Python?
- Q. Expand IDLE.

- Q. What is the use of arithmetic / logical / relational operators?
- Q. Define keywords / variables / data types.
- Q. What is the use of input() / print() statement?

After explaining the chapter, let the students do the course book exercises given on Pages 75 and 76 of the main course book as Exercise.

In Creative Assignment, activity like In The Lab given on Page 76 of the main course book will enhance the ability of the students and serve as a Subject Enrichment activity.

Suggested Activity

Ask the students to develop programs in Python to calculate:

Volume of cube

Volume of cuboid

Radius of circle when the area of the circle is given

10. Artificial Intelligence and Robotics

Teaching Objectives

Students will learn about

What is Artificial Intelligence?

Implementing Artificial Intelligence

Robots and Robotics

Some Popular Robots Around the World

Mechatronics

What can Artificial Intelligence do Today?

Philosophers Views on Artificial Intelligence

□ Uses of Robotics

Androids

Teaching Plan Number of periods: 2

While teaching this chapter, tell the students that human brain has the ability for reasoning, problem solving and learning.

Make the students aware about the birth of the concept of artificial intelligence.

Explain the students in detail about the concept of artificial intelligence.

Share with the students the various fields in which artificial intelligence is being successfully implemented covering:

Robotics vehicles

Game playing

Logistics planning

Machine translation

Natural language processing

Speech recognition

Autonomous planning and scheduling

Robotics

Machine vision

Machine learning

Explain to the students the philosophers' views on artificial intelligence laying significance on:

• Weak AI Hypothesis

Strong AI Hypothesis

Ensure that the scope of Teacher's Corner given at the end of the chapter has been covered.

Extension

Ask the students some oral questions based on this chapter.

- Q. What is AI?
- O. Who is the father of AI?
- Q. Name some fields where AI is being implemented.
- Q. What is Weak AI Hypothesis?
- Q. What is Strong AI Hypothesis?

Evaluation

After explaining the chapter, let the students do the course book exercises given on Pages 84 and 85 of the main course book as Exercise.

In Creative Assignment, activity like In The Lab given on Page 85 of the main course book will enhance the ability of the students and serve as a Subject Enrichment activity.
