PROGRAMMING WITH PYTHON

Chapter-9

A. Read the clues and answer the following:

- It is a programming language developed by Guido Van Rossum in 1991.
.....
- It is a memory location used to store a value.
.....
- It cannot be used as variable name.
.....
- It is a data type in Python to store numeric values.
.....
- It is a special symbol in Python used to perform arithmetic or logical computation.
.....

B. Circle the correct option.

- (Logical / Arithmetic) operators are used to do basic mathematical calculations.
- Comments are written by using the (# / @) symbol.
- The AND operator returns (true / false) value if all the given conditions are true.
- Comments are (ignored / interpreted) by the Python interpreter.

C. Write the name of three types of operators used in Python.

-
-
-
