CONDITIONAL, LOOPING AND JUMPING STATEMENTS IN JAVA

Chapter-5

A. Fill in the blanks using the hints given below:

Hints: do-while, case, while, conditional

1. The loop executes the statements at least once whether the given condition returns true or false.
2. The loop checks the condition first before executing the statements written inside its body.
3. The keyword is used to define the case in switch statement.
4. A statement allows us to change the default flow of a program.

B. Find the error in the given Java code.

```
1. public static void main(String args[])
{
    String s = "Touchpad";
    String s1 = "Orange";
    System.out.println(s + s1);
}
```

.....

```
2. public static void main(String args[])
{
    int i;
    for (i = 1; i <= 5; i++) {
        System.out.println("The value of i is: " i);
    }
}
```

.....
