FUNCTIONS IN C++

Chapter-8

A. Identify the errors in the following codes:

```
1. #include<iostream.h>
   #include<conio.h>
   int display();
   void main()
   {
   Display(21);
   getch();
   }
   int display(int age)
   {
   cout<<"Your age is: "<< age<<" years.";
   return 0;
   }
   }
```

B. Write a program to:

1. Swap two numbers using call by reference method.
2. Find the product of first 7 numbers.

C. Fill in the blanks.

1. means to use the function for performing the desired task.
2. makes the coding easy by breaking program into smaller units.
3. There are two types of scope for variables in c++: and
4. After declaring a function, you have to it.
