## USER-DEFINED METHODS

Chapter-11

### 1. Write the main function to invoke the following functions.

```
(a) Class Test {
    public int mult(int x, int y)
    { return x*y; }
}

(b) Class Demo {
    public void add(int x, int y)
    { System.out.println((x+y)); }
}

(c) Class Example{
    static int a=100, b=200;
    public static void print()
    {System.out.println(a+b);
}
```

### 2. Tick (✓) the correct option.

- |                                                                        |                          |                          |                          |
|------------------------------------------------------------------------|--------------------------|--------------------------|--------------------------|
| (a) Once a function is defined , it can be invoked repeatedly          | <input type="checkbox"/> | (ii) Reusability         | <input type="checkbox"/> |
| (i) Interface                                                          | <input type="checkbox"/> | (iv) All of these        | <input type="checkbox"/> |
| (iii) Restructuring                                                    | <input type="checkbox"/> |                          | <input type="checkbox"/> |
| (b) If a function does not return any value ,its return type should be | <input type="checkbox"/> | (ii) no return           | <input type="checkbox"/> |
| (i) int                                                                | <input type="checkbox"/> | (iv) empty               | <input type="checkbox"/> |
| (iii) void                                                             | <input type="checkbox"/> |                          | <input type="checkbox"/> |
| (c) A function that computes a value and returned is called            | <input type="checkbox"/> | (ii) Procedural function | <input type="checkbox"/> |
| (i) Computational function                                             | <input type="checkbox"/> | (iv) None of these       | <input type="checkbox"/> |
| (iii) Manipulative function                                            | <input type="checkbox"/> |                          | <input type="checkbox"/> |

### 3. Fill in the blanks.

- A function can return only ..... value to its caller program.
- If a function does not return any value its return type is .....
- A function indicating the function name, return type along with function arguments is known as .....
- The variables used to receive the values in function header are known as .....
- Method in a Java program resides in .....
