## OPERATORS IN JAVA

### Chapter-5

#### 1. Short answer type questions.

- What is an operator?
- How many forms of operators are there? Name them.
- What are the special operators in Java?
- What is meant by a hierarchy of operators?
- What is an output statement?
- What are the two parts of an expression?
- What do you understand about prefix operators? What are its two types?

#### 2. Write operator symbol, for example when $m=10$ , $n=5$ , and output for each of the operator given and complete the following table.

Operator Name	Operator Symbol	Example $m=10$ , $n=5$	Output
Subtraction			
Division			
Not equal to			
Multiplication			
Remainder or Modulus			
Increment			
Equal to			
Greater than
