CONDITIONAL STATEMENTS IN PYTHON

Chapter-9

A. Read the clues and answer the following:

- These are the reserved words that has specific function in a program.
.....
- It is a memory location used to store a value.
.....
- It specifies the type of value a variable can contains.
.....
- It is a data type in Python to store numeric values.
.....
- It is a special symbol in Python used to perform arithmetic or logical computation.
.....

B. Circle the correct option.

- A (dictionary/ string) is a collection of key-value pairs.
- The (parenthesis/ exponent) has the highest precedence.
- The second nested (if/ else)indented block will run only when the first if condition evaluates to be true.
- If the condition evaluates to (true/ false), then the control of execution is passed to the next statement after the if block.

C. Write the name of three types of conditional statements used in Python.
